

# Readme File

Keep all the js files in a folder called js. Import both Canvas1.js and main.js files into index.html file. Put all the css files in a folder called css.

The coordinates for the 2 final configurations we want to achieve are present in files first config.txt and second config.txt. Replace the variable positions in the Canvas1.js with any of the config to get the configuration we want to achieve.

Arrow keys are used for moving the primitive and the final configuration on the right side (C1).

'(' is used for rotating clockwise and ')' for rotating anti clockwise.

'-' is used for decreasing the size and '+' for increasing size.
